

WEBINAR: POLLUTION CONTROL DAY

Date: - 8th December 2023

Time: - 5:00 PM to 6:30 PM

Place: - Webinar on Google Meet

Platform: - Online

December 8th, 2023, Mumbai.

The National Service Scheme (NSS) Council of Fr. CRCE successfully conducted a webinar on Pollution Control Day. This event aimed to create awareness among volunteers about various types of pollution studied in India and to raise awareness about diverse pollution control techniques. The webinar addressed different control methods that acquainted volunteers with the coastline and diverse shores of India.

We called upon the speaker, Mr. Swanand Gawde, an accomplished environmentalist with a rich background in the environmental service sector, and a Master's Degree in Environmental Science. He managed to grab the attention of all the volunteers instantly. The session was highly interactive throughout, with all volunteers showing enthusiasm and interest in the topic.

The session kicked off at 5 pm. Mr Swanand sent the pre-webinar survey form to volunteers, which included a quiz about different types of pollution, marine pollution, and various environmental aspects to analyse how aware the volunteers were about different environmental issues. Mr. Swanand started the session by providing insights into the Indian coastline and shores, explaining how they are distributed throughout different states. He then introduced different types of pollution found in India, including chemical pollutants associated with land and marine-based human activities.

The session continued with quiz sessions in between, keeping the session very interactive. Mr Swanand informed the volunteers of how important it is to carry out various pollution control measures. A few measures include properly disposing of hazardous household items, reducing or eliminating the use of fertilizers and chemical herbicides and pesticides, making appointments to service septic systems, and promoting mass plantation.

The session ended with a question-and-answer round where participants engaged with the speaker by asking questions related to environmental conservation. Following this, Mr. Swanand administered another post-webinar survey form for volunteers.

The webinar successfully achieved its goal of spreading awareness about pollution and different pollution control measures. Attendees left the event with a deeper understanding of environmental aspects and were inspired to contribute to their preservation. The NSS Council aims to build upon the success of this webinar event by organizing many such activities that promote social awareness and contribute to the betterment of society.
